Suggested Installation Instructions for: 100-840 Sta-Dri Packs

Sta-Dri Packs feature a new moisture absorption technology that makes them highly efficient and reusable. Use Sta-Dri Packs wherever you want protection from moisture damage and related odor, corrosion, rust, or mildew.

TO USE: Remove each Sta-Dri Pack from the plastic bag, BUT DO NOT OPEN THE CLOTH BAG. Place packs in open areas where moisture and mildew are a problem. For your car, Mid America Motorworks recommends using one bag in each foot well in front of the seats, one on the console, and one in each cargo area. Close all doors, vents, windows, or other source for outside air. Depending on local humidity levels, a Sta-Dri Pack should last between 6 and 8 months.

REGENERATION: After a Sta-Dri Pack has swelled to about twice its original size, it cannot absorb any more moisture. You can regenerate the pack and then reuse it. Simply bake the pack in a CONVENTIONAL OVEN at 250o F. for six hours. NEVER regenerate a Sta-Dri Pack in a microwave oven. You can also sun dry Sta-Dri Packs by placing the packs in a well-ventilated, dry, sunny area until the packs shrink to their original size. Periodically turning the bags over speeds the sun drying process. After regeneration, Sta-Dri Packs work like new.

ORDER MORE STA-DRY PACKS NOW, THEY ARE GREAT FOR BOATS, RVs, AND STORAGE AREAS!
