

Application: 1979-1981 Corvette

604-487

Sunvisor Pivot End - LH

Part Includes

1 - Sunvisor Pivot Elbow

Tools Needed

Search: **Sunvisors**
www.mamotorworks.com

REMOVAL INSTRUCTIONS:

STEP 1.

Mask off the area around (Item A) plug using masking tape to prevent scratching roof mount (Item H).

STEP 2.

Carefully remove chrome plug (Item A), using small screwdriver or pick.

STEP 3.

Pry retainer (Item B) off of existing pivot end, allowing spring (Item C) to be easily removed. NOTE: As the teeth are easily broken off of the retainer during removal, replacement of this retainer and tension spring is recommended, see Mid America's #602-307, Retainer and Tension Spring Kit.

STEP 4.

Existing pivot end (Item D) should now slide out. If pivot end is rusted or broken, use a punch to remove.

STEP 5.

Remove wire clip (Item E) from existing pivot allowing you to slide existing extension rod (Item G) and bushings (Item F) out of pivot end.

INSTALLATION INSTRUCTIONS:

STEP 1.

With rod (Item G) extended outward from sunvisor, assemble bushings (Item F) around rod.

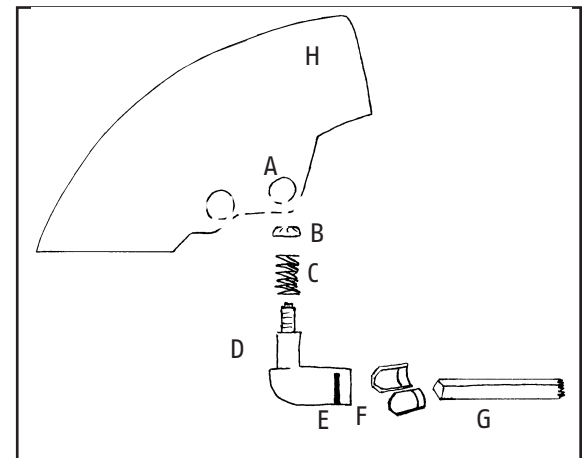

NOTE: If factory bushings were removed (and most likely destroyed during removal), replacement of bushings (Item F) is necessary, see Mid America's #602-305, 1979-82 Sunvisor End Bushings. New bushings will provide the tension necessary to hold your sunvisor in the position you desire.

STEP 2.

Remove wire clip (Item E) from new pivot end. Reinstall rod (Item G) with bushings (Item F) into new pivot end until slots align, allowing reinstallation of wire clip.

STEP 3.

Install completed sunvisor assembly into roof mount (Item H). Insert tension spring and attach retainer to new pivot end shaft. Check movement of sunvisor. Reinstall chrome plug.
