C4 Upper Door Outer Window Seals

Part Includes

- 1 - Lower Outer Driver Side Window Seals
- 1 - Lower Outer Passenger Side Window Seals
- 6 - Rivets
(Not included with 612-233 set)

Tools Needed

STEP 1. Disconnect battery.

- A. 1984-1989: Remove door panel. For helpful removal tips see your application year group below.
- B. 1990-1996: Light lens on door escutcheon hides two screws, remove them also. Dime size colored caps at bottom edge must be removed.
- C. All: CAREFULLY disconnect all wiring harnesses.

STEP 2. Drill out rivets at both ends of the seal. Block off or collar your drill bit with a piece of hose or electrical tape, exposing only the tip of the drill bit to prevent damage to door.

STEP 3. Remove the seal by pressing the strip down and then lift back up to release the clips. Some wrestling may be required on this step!

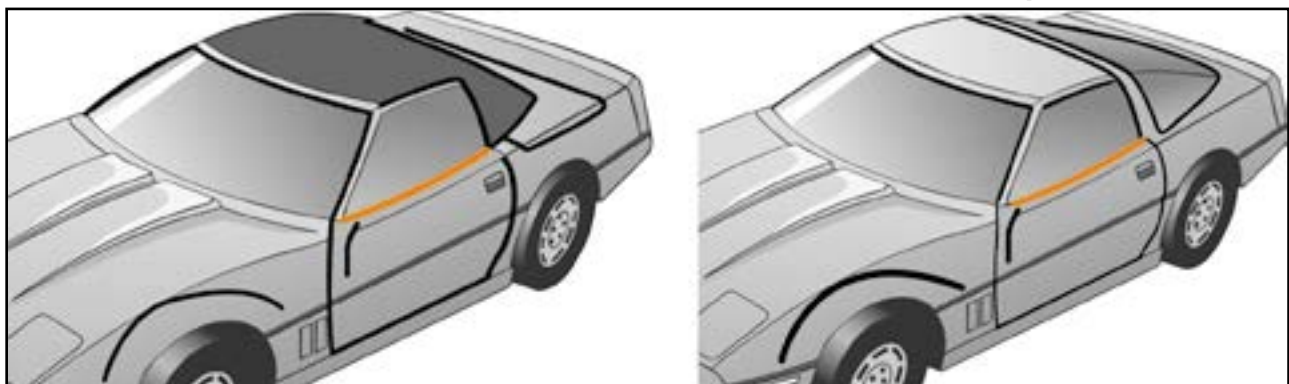

STEP 4. Install the new seal by aligning the clips with the door panel holes, and press into place. Check all clips to ensure they've seated properly. Do this by looking at the way the rubber lip rests on the outside of the door, which should be straight as before. Adjust as needed.

STEP 5. Rivet seal in place with enclosed rivets.

STEP 6. Connect harnesses, test window function, and replace the Door Panel.
